SUPERIOR STRENGTH AND FRONT-LOAD DURABILITY

Designed with one-piece, curved sheck body side construction for superior strength and streamlined appearance, the New Way[®] **Mammoth™ Front Loader** comes equipped with the strongest steel specs in the waste industry. In addition, heavy-duty, single-piece constructed arms, torque tube assembly and Pack-on-the-Go features maximize route and labor efficiency. A west coast lightweight version is also available.

Standard features on the Mammoth front loader refuse truck include a 4-split bearing block with bronze bushings and an easy adjust deceleration valve, giving the operator control of the arm's return to the truck body. Two safety cameras come standard on this series; one affording the operator a view into the hopper and another to assist in reverse.

This front loader also boasts the largest clean-out doors and sump in the industry. Combined, these two features set the standard for ease of access and the clean out of trash trapped behind the packing panel. As with all New Way[®] Trucks garbage trucks, the Mammoth comes standard with a two-year cylinder warranty.

No other front-load refuse truck on the market can offer the ease of use and maintenance, superior strength, durability and product support of a New Way[®] Mammoth front loader.
